SearchAmerica adds 262 hospitals in the first half of 2007

MINNEAPOLIS- (BUSINESS WIRE) – June 21, 2007

SearchAmerica, the industry leader in financially clearing patients, predicting payment, automating the charity process, and verifying patient address information is experiencing unprecedented growth in the first half of 2007, adding more than 260 healthcare facilities during this period. A primary driver for the accelerated growth is SearchAmerica's unparalleled integration with leading technology vendors in the industry. Daniel Johnson, President and CEO, says "we have spent the past few years establishing important partnerships that integrate SearchAmerica into the information systems found in 9 out of 10 of the nation's hospitals." He further added, "our customers consistently report that SearchAmerica has a knowledgeable, professional staff, and easy to implement solutions that drive a substantial return on their investment. We look forward to providing the same experience to our rapidly growing customer base."

SearchAmerica's integration strategy with the industry's major IT vendors will also accelerate growth for the remainder of 2007. Many of the industry's leading technology vendors are now offering SearchAmerica solutions and have been trained on the functionality. Johnson adds "We are quickly becoming a standard in the industry. We are the technology that makes the solutions work for demographic verification, prediction of payment and automated charity processing."
